PATENT

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-8 (Cancelled)

10

9. (Original) An apparatus for transmitting channel quality values over a feedback channel to a

base station, comprising:

a re-synch subchannel generation system for generating full channel quality values; and

a differential feedback subchannel generation system for generating a plurality of

incremental values, wherein the plurality of incremental values are multiplexed with the full

channel quality values.

10. (Original) The apparatus of Claim 9, wherein the plurality of incremental values are code-

multiplexed with the full channel quality values.

11. (Original) The apparatus of Claim 9, wherein the plurality of incremental values are time-

multiplexed with the full channel quality values.

12. (Original) The apparatus of Claim 9, further comprising a transition indicator subchannel

generation system for generating a flag that indicates the start of a transitional period.

13. (Original) The apparatus of Claim 12, wherein a Walsh spreading element is used in the re-

synch subchannel generation system and not used in the differential feedback subchannel.

14. (Original) The apparatus of Claim 12, wherein a common Walsh function is used in the

differential feedback subchannel generation system and the transition indicator subchannel

generation system.

Attorney Docket No.: 020248

Customer No.: 23696

2

PATENT

15. (Original) The apparatus of Claim 14, wherein the common Walsh function is used to

indicate a base station index.

16. (Original) A method for transmitting channel information from a remote station to a base

station, comprising:

generating a full channel quality value; and

generating an incremental channel quality value, wherein the incremental channel quality

value is multiplexed with the full channel quality value.

17. (Original) The method of Claim 16, wherein the full channel quality value is generated over

more than one slot.

18. (Original) The method of Claim 16, wherein the incremental channel quality value is

generated over each slot in a channel frame.

19. (Original) The method of Claim 18, further comprising:

generating a transition indicator, wherein the transition indicator is multiplexed with the

incremental channel quality value and the full channel quality value and is used to indicate a

transition period for the base station.

Claim 20 (Cancelled)

21. (Original) Apparatus for transmitting channel information from a remote station to a base

station, comprising:

means for generating a full channel quality value; and

means for generating an incremental channel quality value, wherein the incremental

channel quality value is multiplexed with the full channel quality value.

22. (Original) The apparatus of Claim 21, further comprising:

Attorney Docket No.: 020248

Customer No.: 23696

3

PATENT

means for generating a transition indicator, wherein the transition indicator is multiplexed with the incremental channel quality value and the full channel quality value and is used to indicate a transition period for the base station.

Claims 23-27 (Cancelled)

Attorney Docket No.: 020248

Customer No.: 23696

REMARKS

Claims 1-8, 20 (Group I) and 23-27 (Group III) have been withdrawn without prejudice in response to the Restriction Requirement mailed June 4, 2004. Applicants hereby elect claims 9-19 and 21-22 (Group II) for prosecution with traverse.

A Petition for Extension of Time and the appropriate fee is filed herewith to extend the response period for one month. Please charge Deposit Account No. 17 - 0026 of QUALCOMM Incorporated in the amount of \$110.00 to pay the necessary fee due under 37 CFR § 1.17 to extend the period for response one-month from July 4, 2004 to August 4, 2004. The Commissioner is hereby further authorized to charge payment of any additional fees that may be required, or credit any overpayment, to Deposit Account No. 17 - 0026. A duplicate of this sheet is enclosed.

Respectfully submitted,

Dated: July 19, 2004
